

The Performance Upgrade for the Falcon 50

A joint venture between West Star Aviation, Inc. and Yankee Pacific Aerospace, Inc.
with the engine upgrade supported by Honeywell Aerospace.

For more information call Jim Swehla at 800-922-2421 or visit www.50dash4.com

East Alton, IL • 618-259-3230

A Falcon 50 aircraft is shown in flight, banking upwards and to the right. The aircraft is white with dark accents and is flying over a rugged, snow-covered mountain range. The sky is a deep blue. The aircraft's two engines are visible on the wings. The cockpit windows show the pilots. The overall image has a blue tint.

*The Performance Upgrade
for the Falcon 50*

A New Level Of Falcon 50 Performance... For Less Than You Might Think.

Since its very first flight in 1976, the Falcon 50 aircraft has continuously astonished the aviation community with its blend of cabin volume, long-range, intercontinental capabilities and its short field take-off and landing characteristics. It remains a marvel of the mid-sized business jet class. Now operators of this legendary aircraft have an opportunity to take the already exceptional performance of their airplane to new heights.

Premier Aircraft LLC, with full support from Honeywell Aerospace, is now offering a certified performance upgrade program that increases critical performance characteristics of the Falcon 50 aircraft by converting the TFE731-3-1C or TFE731-3D-1C engines to TFE731-4-1C Configuration.

The 50Dash4 Performance Upgrade expands upon the proven experience, performance and reliability of the TFE731 Engine. What does this mean for you? Ultimately, it means you will fly faster, farther and higher for less while maintaining or increasing the value of your Falcon 50 aircraft. Additionally, aircraft with this upgrade will enjoy longer maintenance intervals and increased engine durability, equating to reduced maintenance costs.

How can one upgrade deliver so many benefits? Simple. You start with one of the most proven engines in aviation along with an already exceptional airframe and add the latest engine technology for even better performance. Specifically, the 50Dash4 Performance Upgrade is comprised of:

Nacelle And Engine Installation:

- **New compound nozzle**
(Improved performance)
- **Modified fan duct inner skins**
- **Modified HP Bleed Ducts**
- **A more efficient, higher pressure ratio fan**
(Improved TSFC)
- **Helical fan gearbox** (Durability)
- **LPC4 Seal** (Durability)
- **Bare-metal HPC Shroud** (Durability)
- **Same Hot-end as -5B Engine** (Durability)
- **Gen 3 Carbon Seals** (Durability)
- **N1 DEEC** (Reduces Pilot Workload and provides EICAS)

Cockpit:

- **Overhauled and re-marked ITT gauges**

True Affordability

Longer Maintenance Intervals

After the 50Dash4 Performance Upgrade is complete, your aircraft will have MPI inspection intervals of 2,500 hours and CZI inspection intervals of 5,000 hours.

Lower Fuel Burn

The 50Dash4 Performance Upgrade results in 14% lower trip fuel (M 0.80, 2,500 nm, 4 pax).

A “No Frills” Modification

The 50Dash4 Performance Upgrade is an engine-only modification that requires minimal changes to nacelles, airframe and cockpit instrumentation.

New Engine Warranty

Honeywell provides a 3-year/1,800-hour warranty on all 4-engine conversions.

Minimal Downtime

Downtime for completion of the 50Dash4 Performance Upgrade is estimated to be six working weeks but opt for TFE731-3 or -3D rental engines from Honeywell, installed by West Star Aviation, Inc., and you'll be back in the air in just four days.

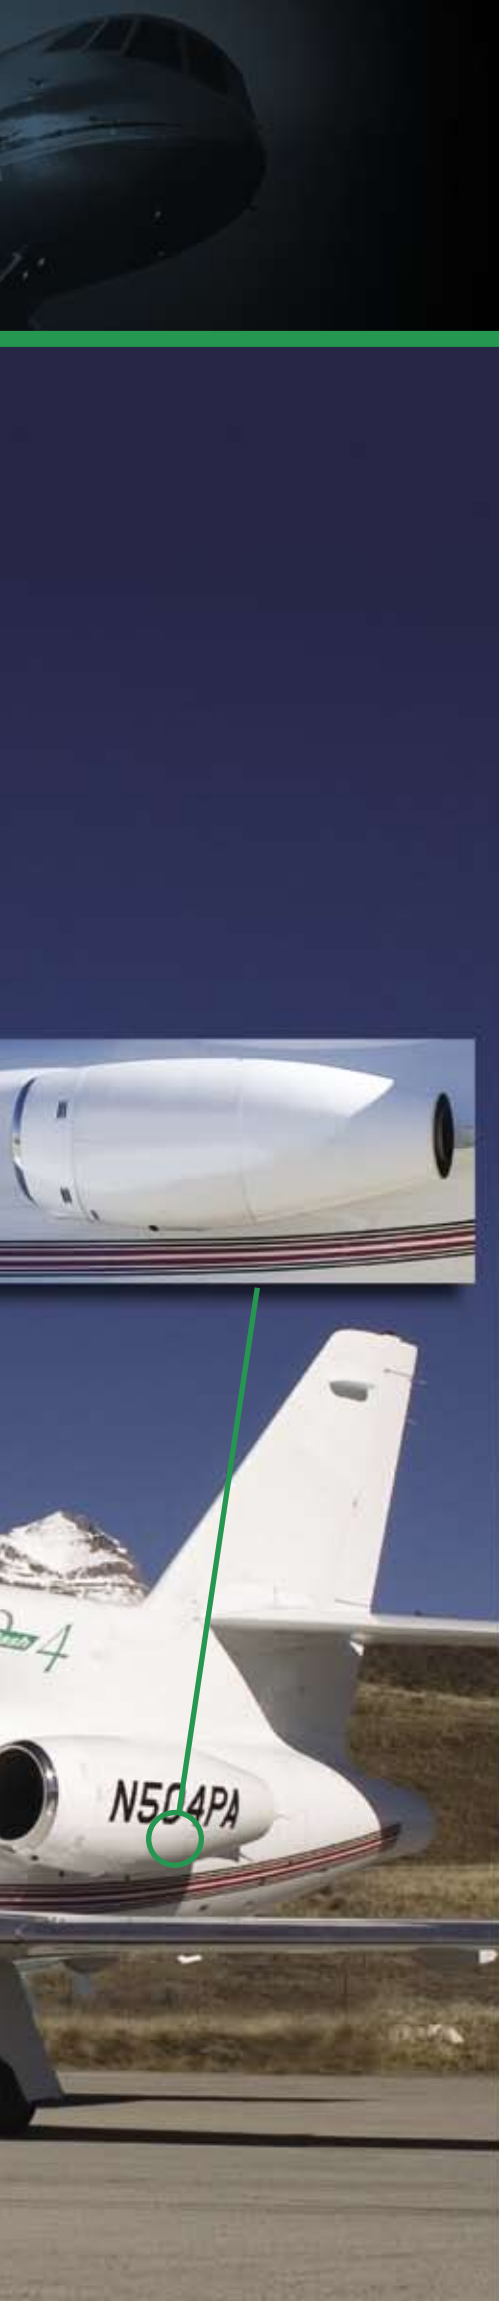

Lower MSP Rates

The 50Dash4 Performance Upgrade allows operators to benefit from reduced MSP rates. Additional MSP credits are determined based on projected hours at the anticipated input date since last MPI/CZI for the engines. Credits may also be available for N1 DEECs or -3D conversions. Non-MSP operators will be given the chance to enroll at the 50-4 rate.

Affordable Upgrade Pricing

Prices start at just \$2.3 m* for non-MSP operators. This price can potentially be reduced to as little as \$1.6 m* for MSP operators after credits are calculated and depending on your specific aircraft's status within the inspection interval. Call now for a detailed analysis for your specific aircraft.

*Estimates in 2007 Dollars

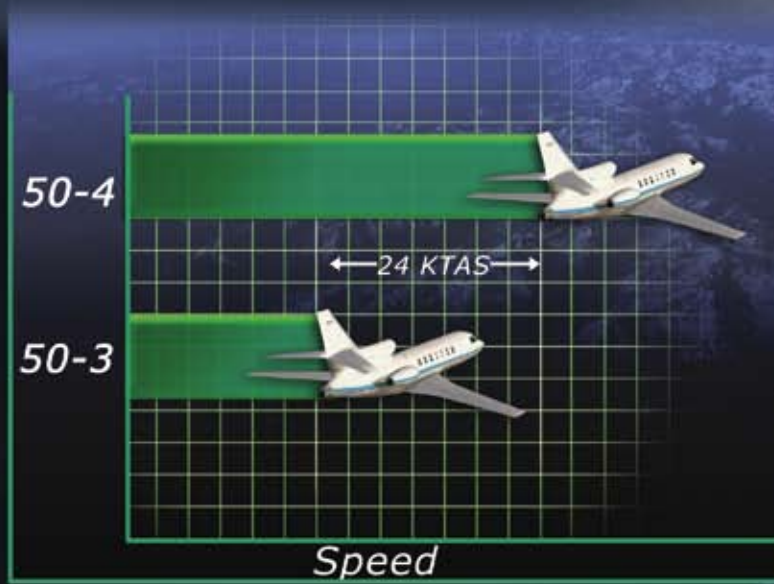

50Dash4 Performance

• Range • Speed • Altitude

Increased Performance

Improved Time To Climb, Higher Cruise Altitude, Increased Range And Higher Takeoff Flat Rating Temperature

The 50Dash4 Performance Upgrade improves critical flight characteristics over the unmodified Falcon 50 aircraft.

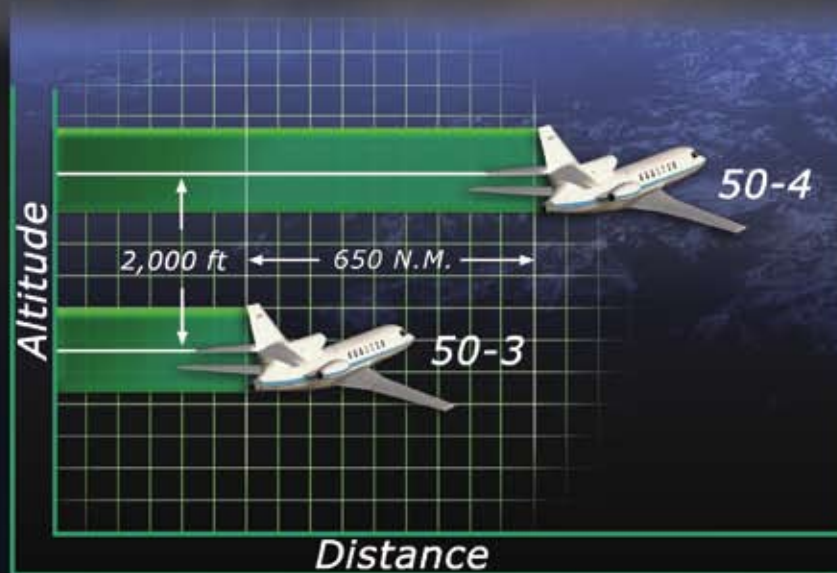

Increased Cruise Speed –

- Increased thrust equates to speed and the Performance Upgrade for the 50Dash4 results in a 24 KTAS Max Cruise Speed Increase (30,000 lb at FL410)
- Increased cruise speeds result in shorter mission times, 20 minutes for 2,500 nm mission for same fuel burn
- 7% improvement in Specific Range at normal cruise speeds

performance

altitude • Affordability

Increased Range And Altitude –

- Increase of 33% based on high/hot conditions: (5,000 ft. elevation, 7,500 ft. runway, 90°F [32°C])
- Direct Climb Altitude increased by 2,000 ft. (from FL370 to FL390)
- 50Dash4 results in 14% lower trip fuel (M 0.80, 2,500 nm, 4 pax)

**EASA Approval
Forthcoming**

**Stage 4
Certified**

Improved Time-to-climb –

- 7 minutes faster to 37,000 ft. (21 min. vs. 28 min.)
- Direct climb to FL390 in the same time original aircraft climbs to FL370
- Quieter, Stage 4 Certified

Confidence And Quality

West Star Aviation, Inc. has come together with Yankee Pacific Aerospace, Inc. to form Premier Aircraft LLC, a financially strong entity that draws from a large knowledge base of engine upgrade programs such as the Falcon 20-5 and the Falcon 50-40.

The partnership of these organizations gives Premier Aircraft LLC a high level of expertise and capability with regard to structural, electrical and propulsion engineering. The 50Dash4 Performance Upgrade for the Falcon 50 is currently performed at

West Star Aviation, Inc. locations in East Alton, IL, Grand Junction, CO and Dallas, TX in close conjunction with Honeywell Aerospace.

Additionally, West Star Aviation, Inc. has FAA-Designated Engineering Representatives and FAA-Designated Avionics Representatives on staff to ensure your Performance Upgrade is completed safely and correctly.

Call today to discuss the specifics of your aircraft and to see how you can benefit from this Performance Upgrade.

About Premier Air Center (now West Star Aviation, Inc.)

You can be sure that West Star Aviation, Inc. takes pride in delivering an exceptionally high level of service and support to the Falcon owner/operator because they are FAA certified on all Dassault Falcon aircraft. Conveniently located at St. Louis Regional Airport (KALN), West Star Aviation, Inc.'s main installation center for the 50Dash4 Performance upgrade, is just minutes from downtown St. Louis.

A complete array of maintenance, modification and repair services are available. For more information please visit www.weststaraviation.com or call 800-922-2421.

East Alton, IL 800-922-2421

Grand Junction, CO 800-255-4193

Dallas, TX 877-358-1679

About Yankee Pacific Aerospace, Inc.

Yankee Pacific Aerospace, Inc., based in Rye, NH, provides engineered products and services to aircraft OEMs, major subcontractors, modification centers, aircraft owners and operators in the corporate, commercial, and government aviation markets.

Please visit www.yankeepacificaerospace.com for more detailed information or call 603-433-3110.
